[Handwritten note:]
John...
Pls. prepare
reply. I am
sure we will
hear from Kiplinger
shortly.

[Handwritten note:]
TOM P
WRITE
ANSWER.

In preparation for service release of the proposed Cosworth performance package we will need to know the parts inventory picture to handle an annual requirement of 2,000 units.

It is the intent of engineering to release for service the surplus Cosworth Engine material at Tonawanda. This material is stored or committed for, from production sources.

Please provide the following inventory information:

1. Parts completed at Tonawanda
2. Parts completed at sources
3. Parts in process at sources
4. List of additional material required to make 2,000 units

It is our understanding that changes are being considered for several of the Cosworth Engine components for 1975 to meet the EPA standards that could obsolete material that was produced for 1974 usage.

This material could be used for off highway service application if management approves. *[Handwritten mark]*
