October 14, 1974

TO: See Attachment
FROM: Mr. F. A. Beaulieu
SUBJECT: 1975- $\frac{1}{2}$ Cosworth Vega.

Attached is the initial issue of the 1975- $\frac{1}{2}$ Cosworth Vega Pilot Line requirements and related specifications. The order is issued to cover the procurement of material and the assembly of three (3) Cosworths for Chevrolet Engineering testing purposes during December, 1974.

Production of the Cosworth Vega is presently targeted for February 3, 1975. The early build of the three (3) Cosworths at Lordstown in December will expose the Lordstown personnel to the new vehicle to affect efficient introduction to the production line in February and allow engineering sufficient time to correct major problem areas.

Specifications on the orders as shown are firm and will be changed only by authorization from the Chevrolet Planning Department by the issuance of ECS's affecting these specific orders.

All units are to be assembled at Lordstown beginning December 4, 1974 and should be completed and shipped prior to December 18, 1974.

All inquiries relating to these orders are to be made to Frank A. Beaulieu, 8446-1586.
